Tobacco Free Youth

Anti Tobacco Campaign

by VISMA...

Tobacco is the single largest cause of preventable death globally. 100 million people died in 20th century and if this trend continues, there will be up to one billion deaths in the 21st century. Almost all tobacco users began use as teens. Research says that if you don't take it before the age of 26, you will seldom take it afterwards.

There are lots of reasons teens start taking tobacco. Whatever the reason, once you start, you soon discover a little secret: tobacco is an addiction and it's really, really hard to stop. As a Parent, whether you use it or not, your words and actions can make a significant difference in your child's choice to remain tobacco free.

VISMA has started an Anti-tobacco campaign. Our focus will be on preventing youth from taking tobacco. We are seeking your support and guidance in this noble cause. Please send your feedback and suggestions to admin@vrajbhoomi.org
